Abstract of JP2001128286

PROBLEM TO BE SOLVED: To provide a small-sized acoustic transducer with a simple structure, high reliability that can accurately manufactured and assembled. **SOLUTION:** This acoustic transducer is based on the principles of electrodynamics consisting of a diaphragm 2 made of transducer sheets placed in a case 5 and a coil 4 with lead wires 14. The transducer sheets form a lug 3 erected radially outwardly at least at one position around them and at least one of the coil lead wires 14 is fixed to the area of the lug 3 or preferably adhered thereto.
